

LIQUID GOLD

NURSERY STRENGTH PLANT FOOD

How to use LIQUID GOLD

Liquid Gold has been designed to provide a range of micro and macro nutrients for your growing plants. One proven way to do this requires the use of two separate concentrate solutions which can be mixed into water to form a complete feed.

Our product is suitable for most types of plants. It is particularly suitable for indoor and outdoor pot plants, all seedlings, grasses and most trees.

The **Liquid Gold** sachet is made up of two sachets which are joined together for your convenience. The top sachet is solution **A** and the bottom sachet is solution **B**. A seal across the centre prevents the two solutions from mixing together.

To mix **Liquid Gold** simply:

1. Fill a container with 5 - 10 litres of water.
2. Cut/tear and empty sachet **A** (the top sachet) into the container of water.
3. Cut/tear and empty sachet **B** (the bottom sachet) into the container of water.
4. Stir the mixture gently for 3 seconds. The feed is now ready for use.

Liquid Gold requires very little mixing. Once mixed, **Liquid Gold** can be stored in an appropriate container for an indefinite period of time. Simply re-stir for 3 seconds before use.

The concentrate solution is not at all harmful to the skin. Should you spill the concentrated or mixed solution onto your skin, simply wash off with fresh water.

Apply **Liquid Gold** by pouring the mixed solution around the root zone. Be generous, making sure the area is well wet - almost saturated. It is often good to water the area first. **Liquid Gold** can also be sprayed over the plant leaves for added benefit. Regular applications of **Liquid Gold** will provide best results.

QUICK FACTS

1. **Liquid Gold** has a long shelf life and can be stored anywhere.
2. **Liquid Gold** makes a great gift for all ages.
3. If your plants need a boost, mix **Liquid Gold** in 5 litres of water instead of 10 litres.
4. Because it is a liquid, the root system can uptake the nutrients quickly - often within hours.
5. By applying **Liquid Gold** regularly, you can match the growth of your plant with the natural environmental conditions - light, temperature, and moisture.
